for (i=0; i<=k; i++)
{
    p = p * i;
}
printf("%d", p);
}

```

3) Insertion sort - The data is sorted by inserting the data into an existing sorted file; the process follows as elements are known before while location to place them is searched.
best case complexity is $O(n)$.

⇒ eg of selection sort: ⇒ eg of insertion sort

17	6	3	13	6
↑		↑		
m		1		
3	16	17	13	6
3	6	17	13	16
3	6	13	17	16
3	6	13	16	17

7	4	5	2
4	7	5	2
4	5	7	2
2	4	5	7

Selection sort - The data is sorted by select and placing the consecutive elements in sorted location.
The best case complexity is $O(n^2)$.

```

1) #include <stdio.h> ("stdio.h")
int main ()
{
    int a[100], n, c, d, swap;
    printf("Enter size");
    scanf("%d", &n);
    printf("Enter elements");
    for(c=0; c<n; c++)
    {
        scanf("%d", &a[c]);
    }
    for(c=0; c<n-1; c++)
    {
        for(d=0; d<n-c-1; d++)
        {
            if(a[d]>a[d+1])
            {
                swap=a[d];
                a[d]=a[d+1];
                a[d+1]=swap;
            }
        }
    }
    printf("Bubble sorted");
    for(c=0; c<n; c++)
    {

```

```
